c

## Semantic Ambiguity

filter dogmatism\_data

I can filter that

Choose a column to filter by:

post	score
>\$150B every year If you want to scare ignorant..	15

score

How do you want to filter the column? Given me a command that returns true or false, and I'll apply it to the data

use less than

I can run {x} < {y}

What is x?

the column

I'll use the column

What is y?
